e-Portfolio Reflection 2

OLTD 503 – Seminar 4 – Building Virtual Communities

OLTD Learning Outcome:

Examine current research around best practices and emerging practices

Evidence Chosen to Support Outcome:

The evidence I chose is two part assignment that summarizes and reflects about my experience on 503. The first part is a Visual Reflection that combines my personal experience and the academic literature reviewed during the course; the second is an APA style paper that formally reviews my learning journey and learning of the current academic theories/ frameworks reviewed during the course.

Reflection to Support Evidence:

The assignment required to create a product that help us reflect about our experience while incorporating the academic literature reviewed during the course. Although at the beginning I had no intention to create a visual representation of my learning. As I was writing the paper I realized that my learning would be more genuinely represented through images so I complemented my academic paper with a visual reflection.

As a teacher this process allowed me to think about myself as a learner and acknowledge the importance of knowing how I learn. Also, this project was an opportunity to review current academic literature that will assist me to revise my frame of reference and personal course design philosophy.
