

# e-Portfolio Reflection 2

## OLTD 508 – mLearning Annotated Bibliography

OLTD Learning Outcome:

Integrate current cognitive learning and brain-based learning theory

- Examine current research around best practices and emerging practices

Evidence Chosen to Support Outcome:

I have chosen an annotated bibliography as the second piece of evidence on my e-portfolios. The inquiry question for this research is “How the use of mobile technologies supports the social aspect of learning? Also, it connects to the course’s critical challenge questions “How can mobile technologies augment formal knowledge and assist both the student and the teacher with their learning?”

Reflection to Support Evidence:

Although I really enjoyed and learned a lot working this assignment, it was challenging for me and gave me a bit of perspective in terms of the work I assign to my students and how important is to be able to know who you are as a learner.

I do enjoy working on academic research and I can easily immerse myself into it with joy but being an ESL person makes me a very slow reader and even a slower writer. This made me empathize with some of my students and reminded me how important is to help them understand their weaknesses and strengths so they can develop strategies to help them.

Also, this assignment gave me the opportunity to get a clearer overview of the topic and guide and narrow my research. Working on this project I was able to collect a good variety of academic sources to get me started.
