e-Portfolio Reflection 1

OLTD 511 – Special Topics. Blended Learning

OLTD Learning Outcome:

- Demonstrate basic competency with design and implementation within a variety of online learning environments and tools
- Become familiar with common terms, definitions and elements related to online environments

Evidence Chosen to Support Outcome:

The evidence I chose is a proposal and a presentation that outlines the rationale and steps needed to create a blended learning program at Gulf Islands Secondary School. I developed this projects in partnership with a colleague who is also part of the OLTD program.

This project provided detailed information about the variety of aspects to consider when attempting to transform an existing online learning environment into a blended learning program.

Reflection to Support Evidence:

Developing this project was an important experience for my professional development, particularly because of the collaboration required to develop it. The work associated with this proposal, demanded a careful evaluation of the existing conditions of our online learning program, a theoretical framework to support our decision making process and detailed consideration of the steps required in order to balance the interest of all stake holders, available resources, goals and needs. Also, completing this project required fairly advanced technical skills to create professional looking documents.
